SmartFleet - Vehicle Intelligent Solution

It has always been a challenge for firms/organisations to grapple with the enormous task of keeping abreast of all activities of the vehicles/trucks in their fleet – where, what, how, why, authorization and at the same time following and filling reports on each and every one – mileage, fuel consumption, assignments, where it is and why and in real time. It is the usual practice of managers to attempt to keep a tab on their drivers/trucks/vehicles by GSM phone or manual sightings or reliance by third parties for confirmation.

With the coming of the revolutionary SmartFleet – a Fleet Management Solution from Smartech Information Security Limited, it has brought succor to the industry and a major relief to the logistic nightmares experienced by managers, from a small to large fleet for use at your office or while on the move.

Our service has excellent features which will enable you to manage effectively your fleet, no matter how large or small – all in real time. It is that simple! You will always know where your valued assets are; providing smart security of the vehicles/trucks in the field or control centre or parks. No server set-up or data GSM connection needed and is simple to set-up, easy to use! You can monitor and at the same time manage your vehicles/trucks using simple text messages or with free software installed on your mobile phones and PC.

SmartFleet has the following additional features/benefits:

- ✚ Receive useful automated reporting such as trip information, zone crossing and speeding alerts.
- ✚ A built-in motion sensor which will notify you if the vehicle/truck is being stolen.
- ✚ Listen to what is happening inside the vehicle.
- ✚ Shut down the engine with one SMS or in the case of our Fleet Security version with a powerful Remote Demobilizer.
- ✚ Locate and track your drivers and staff as they go on a journey/trip.
- ✚ Automatic and periodic location reports.
- ✚ Automatic trip reports such as mileage and stops.
- ✚ Zone Alarm, radius 0.1-999km from a specific location point.
- ✚ Send a location report by simply pressing one button.

- ✚ Activity Reports, e.g. beginning of a shift, start of a journey.

We install software for Android which enables you to use your tablet computer like Samsung Galaxy Tab, etc to control your fleet – the best solution for any Fleet owner/manager! We can guarantee that you will be very happy with our fleet management solution and it is worthwhile to have. It incorporates a daily Tracking, Monitoring and Vehicle Recovery which at first time is very easy to use and can be done with simple, English commands from your mobile phone. All this comes on any GSM phone with our fleet management software for PC and Smartphone. You just pay the text messages you use and you can use any Nigerian GSM Operator's SIM Card, pre or post-paid.

Additional Benefits of SmartFleet Solution

1. Ultimate Security, Ultimate User-Friendliness

Our fleet solution device comes with a patented TLD Landmarks mapping customized for Nigeria with detailed location information covering Nigeria nationwide from Ogun to Borno or from Sokoto to Akwa-Ibom. It is Extreme User-friendly for Extreme Situations! In the event that your vehicle/truck is taken cross-border, our patented TLD Landmarks Version which comes on our device covers all relevant cross-border information.

2. Management is simple, private and economical!

SmartFleet Landmark Data (TLD) allows easy localization without internet or map applications and the owner can locate his assets with just a cost of a simple text message (SMS). With free of charge software the user can visualize the location of his devices on a map and its device can be used with any mobile phone. It reports the location with distance and direction to the nearest locally well-known landmark and additionally with or without GPS coordinates. The device has over 10,000 preloaded nationwide TLD Landmark points with critical cross-border information included. Location reports are thus very easy and quick to understand by any user just by reading the SMS it sends.
